Bonzo Concierge

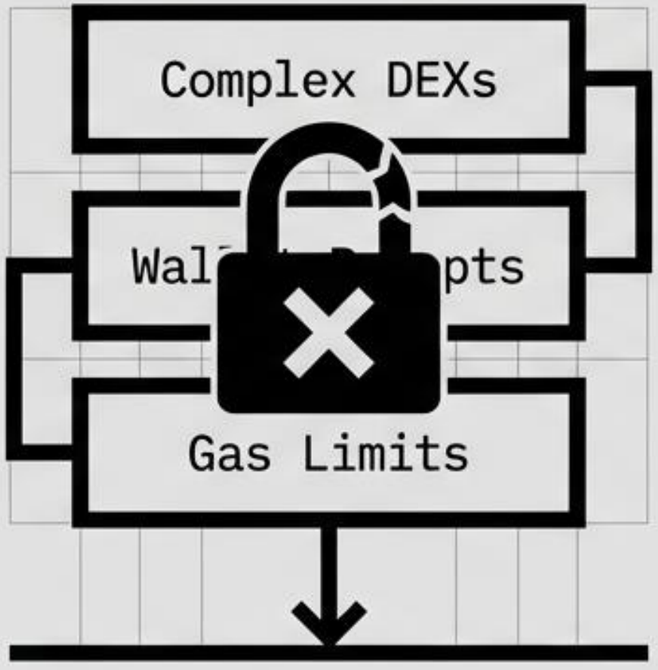
Intent-Based DeFi for Hedera.

https://www.youtube.com/watch?v=EfWChKsFjTI

• Track: AI & Agents | Bounty: Bonzo | Builder: Vincent Beltrani

The UX Bottleneck

The Friction



Complex DEXs, wallet prompts, and gas limits block retail adoption.

The Solution

Zero UI, pure intent.

The Innovation: Abstracting smart contracts into natural language, powered by Hedera's sub-second finality.

Under the Hood

The Brain: Vercel AI SDK (Intent Parsing & Routing)

The Muscle: Hedera Agent Kit (EVM Execution via HSCS)

The Target: Bonzo Finance Smart Contracts

The Trust: Real-time, transparent execution tracing.

Ecosystem Impact

Business Model

B2B white-label widget for existing Hedera dApps to boost deposit conversions.

The Catalyst

Web2-style UX drives mass Web3 onboarding and spikes Hedera TPS.

User Validation

Added `get_vault_yields` integration based directly on early user testing.

Roadmap & Learnings

Key Insight: Real-time AI interactions demand Hedera's speed. Slower chains break the illusion.

Phase 1 (GTM)

Embeddable React widget for partner dApps.

Phase 2 (Security)

WalletConnect integration for self-custody (HashPack/Blade).

Phase 3 (Routing)

Complex multi-step execution (e.g., "Swap USDC to HBAR, then lend").
